

# Setting up your Tiramisu account

Robert A Petit III

Last Updated: July 16<sup>th</sup>, 2020

This document describes (with images, yay!) the step-by-step process of activating your account on Tiramisu. This is required to have your home directories created, since they are not actually created until you try to access them.

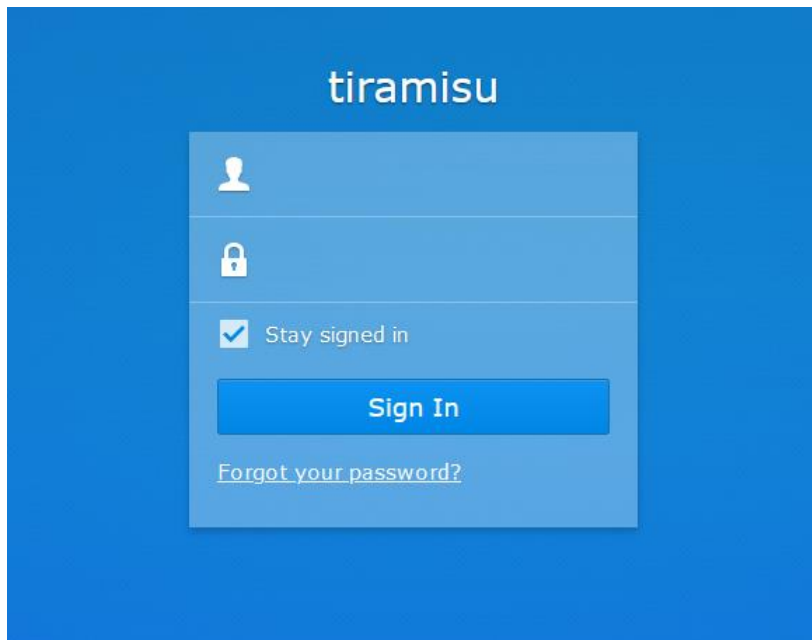

**Important:** *You will not have server access until these steps are completed (due to the whole home directory creation bit).*

## Step 0: Acquire Username and Password

You should have received an email with your user name (Emory NetID) and password. Follow the link to Tiramisu (<https://tiramisu.genetics.emory.edu:8888/>) to log in for the first time. You will need to be on Emory's network (on campus or VPN) to complete this process.

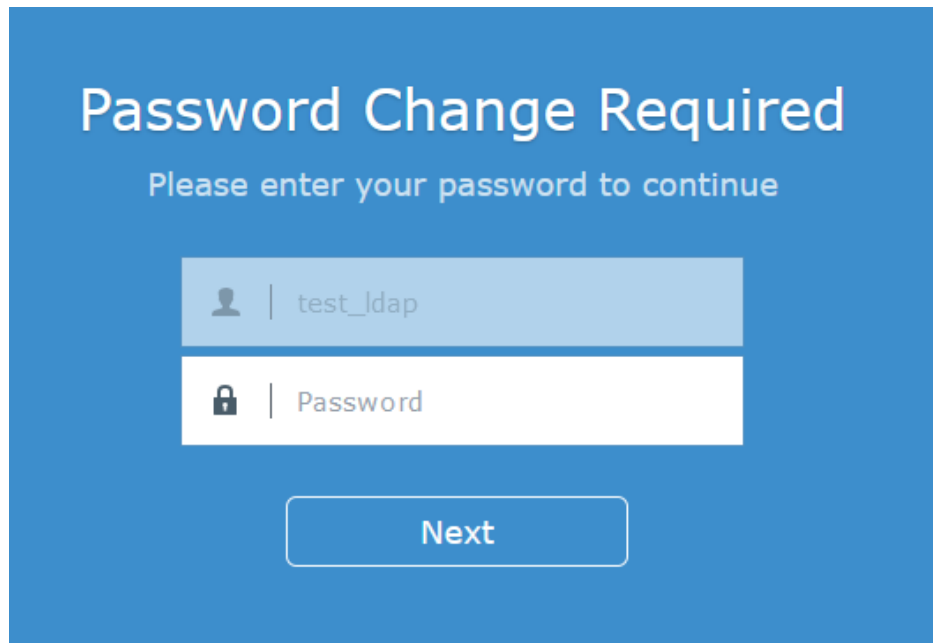

## Step 1: Login into Tiramisu

After clicking the link above you will be met by a screen like this. Type in your username and password, then click "Sign In"

The image shows a login interface for 'tiramisu' on a blue background. The word 'tiramisu' is at the top in white. Below it is a light blue rectangular box containing the login fields. Inside this box, there are three input areas: the first has a person icon, the second has a lock icon, and the third has a checked checkbox followed by the text 'Stay signed in'. Below these is a blue button with the text 'Sign In' in white. At the bottom of the box is a link that says 'Forgot your password?' in blue text.

## Step 2: Do it again!

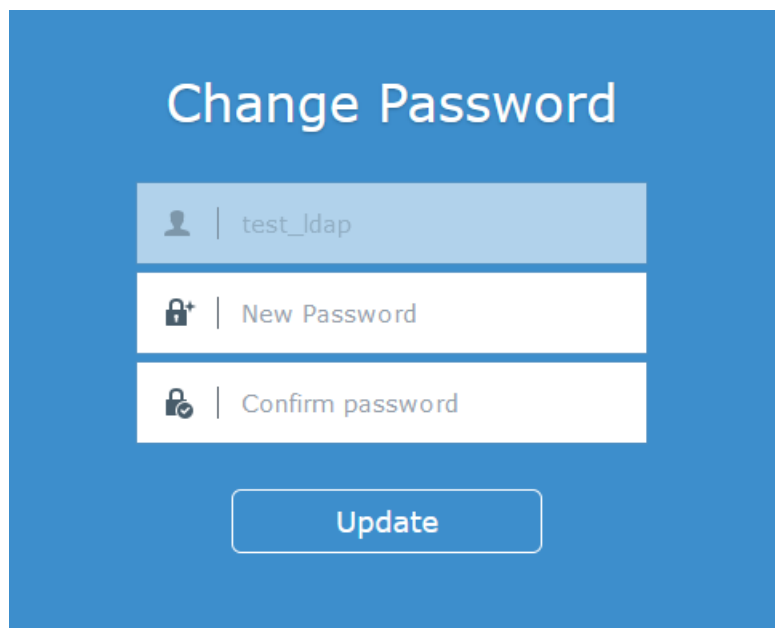

On first login you are required to change your password. So you will be met with the following screen, where you are asked to retype your current password (the one I sent you). Click “Next” after typing it in.

The screenshot shows a blue background with the title "Password Change Required" in white. Below the title is the instruction "Please enter your password to continue". There are two input fields: the first is a light blue box with a user icon and the text "test\_ldap"; the second is a white box with a lock icon and the text "Password". Below these fields is a white button with the text "Next".

## Step 3: Change your Password

At this point you will change your password. There are no requirements in-place for password strength, but please use a decently strong password. Type your new password in twice, then click “Update”.

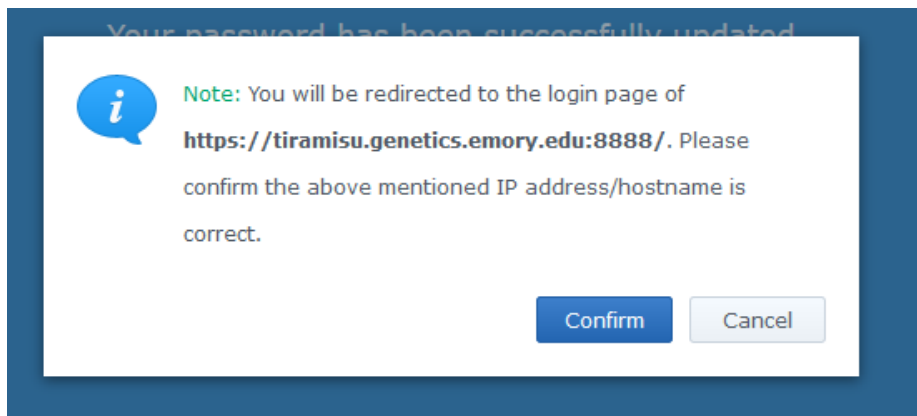

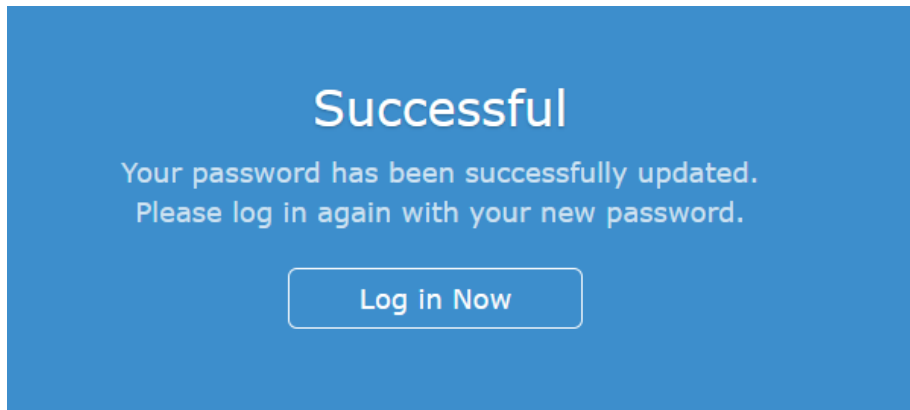

The screenshot shows a blue background with the title "Change Password" in white. Below the title are three input fields: the first is a light blue box with a user icon and the text "test\_ldap"; the second is a white box with a lock icon and the text "New Password"; the third is a white box with a lock icon and the text "Confirm password". Below these fields is a white button with the text "Update".

## Step 4: Successfully Changed Password

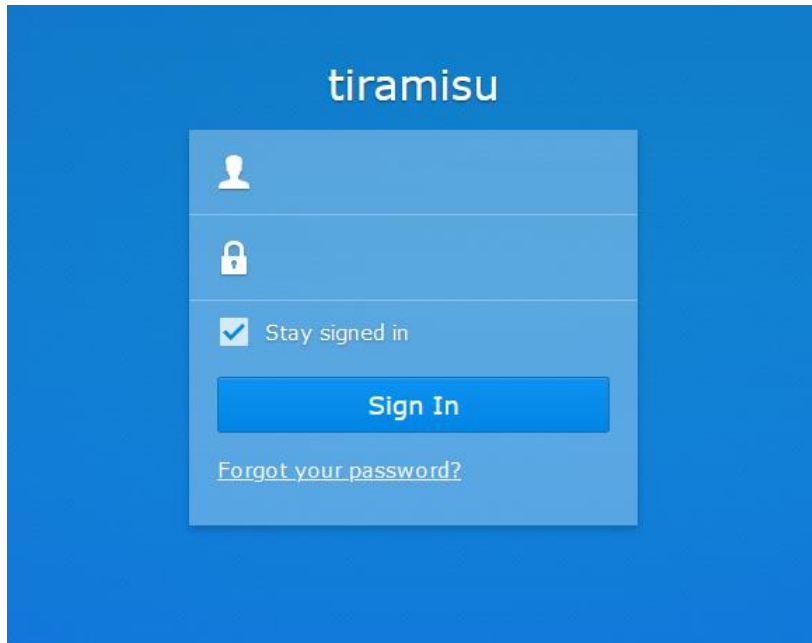

After changing your password, you should get a screen saying it was successful. When you click “Log in Now”, a window will pop up saying you are being redirected by to Tiramisu (Which is fine)

**Important:** *If you do not successfully change your password, please contact me.*

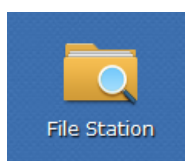

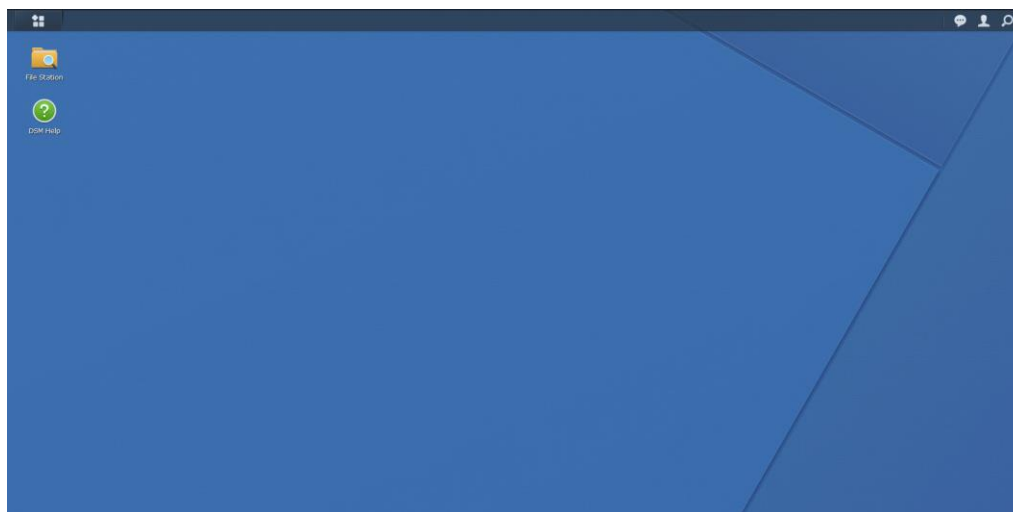

## Step 5: Log into Tiramisu

Once you are redirected to Tiramisu main landing page, you will be met with a familiar screen. Log in with your username and new password.

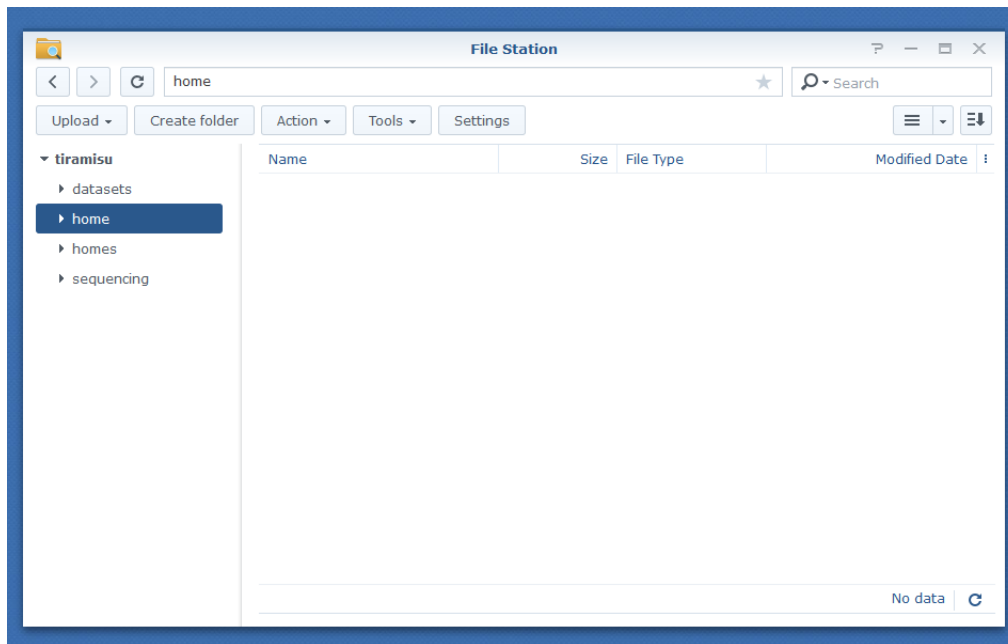

## Step 6: Logged into Tiramisu

Once you are logged in to Tiramisu, you will see this desktop-like dashboard. Click the "File Station" icon.

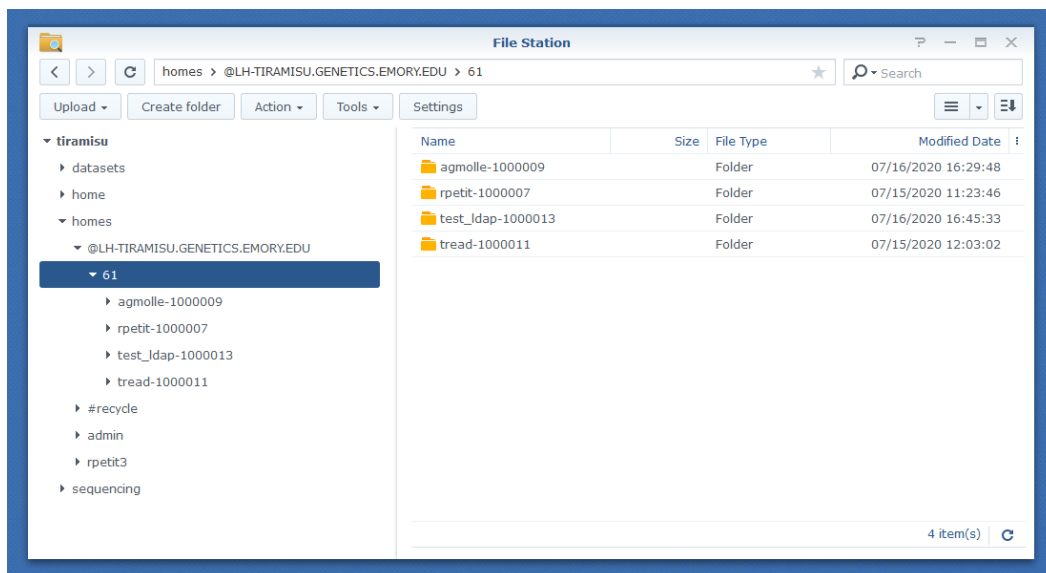

## Step 7: Verify Home Directory Creation

By default, Tiramisu will not create a home directory for LDAP users, until they access it on Tiramisu. This is slightly annoying, but by opening 'File Station' you are accessing your home directory on Tiramisu.

If you want to verify your home directory has been created, navigate to: [homes/@LH-TIRAMISU.GENETICS.EMORY.EDU/61/](https://homes/@LH-TIRAMISU.GENETICS.EMORY.EDU/61/) In here you will hopefully find a folder with your username and user id.

After you have done this shoot me an email and I'll return your server access.
